

Jarvis Hire

Hire faster with greater confidence.

Xin chào, mình là Tiểu Kiệt, trợ lý AI của bạn 🙌

你好，我是小杰，您的 AI 助理 🙌

MISSION

Build better hiring decisions

We are not building engagement. We are reducing uncertainty before the employer’s first real decision.

Help employers hire faster with greater confidence

Jarvis Hire exists to make the first shortlist trustworthy: standardize the job intake, verify fit, and surface only candidates, employers can act on

Zero upfront

Successful Paid Hires

48h

First shortlist target

Day 30

Verified employment

01 Reduce uncertainty

Verify trust before employers spend time interviewing a long list of CVs.

02 Prove value in the funnel

Optimize for screening quality, shortlist speed, and repeat employer behavior.

03 Scale into infrastructure

Compound trust, data, and regional talent access once core value is proven.

COMPARISON

Traditional hiring vs. Jarvis hiring

The shift is from manual uncertainty to a verified, outcome-based workflow.

TRADITIONAL		JARVIS	
Channel	Facebook groups, referrals, freelance networks	Channel	Structured employer intake + focused sourcing
Fit verification	CV claims and late interview discovery	Fit verification	Chinese + domain fit checked before HR review
Shortlist	Manual review, gut feel, inconsistent timing	Shortlist	AI-assisted ranking + ops-verified shortlist
Risk model	Upfront cost and no guarantee mechanism	Risk model	Pay after Day 30; replacement support logic
Workflow visibility	Email, spreadsheets, disconnected tools	Workflow visibility	Pipeline, stage control, SLA and audit trail

Jarvis provides employers a shortlist that they can trust before the first interview.

PROBLEM

The real problem is trust at speed

Employers do not fail because of a lack of candidates; they fail because they cannot trust candidates fast enough.

CV volume is high

Quality is hard to verify at intake; screening becomes a bottleneck immediately.

Screening is inconsistent

Different recruiters, time pressure, and bias produce different outcomes for the same role.

Language risk is hidden

HSK claims and CV wording do not prove professional Chinese ability for the job.

Domain fit is unclear

Manufacturing, logistics, sourcing, and coordinator roles require different screening logic.

Candidate experience breaks

Delays and vague criteria reduce trust, response rates, and offer acceptance.

Bad hires are expensive

Mismatch creates rehiring costs, lost productivity, and wasted manager time.

Jarvis creates hiring decisions, not engagement

Employer demand is the trigger. Candidate supply is the asset. Jarvis is the trust layer in between.

PMF signal: Repeat employers + Verified paid hires

What the RPO engine optimizes for

The product is reliable hiring throughput and quality: demand-driven, traceable, and manual-first until stable.

Competitive Landscape

No one else combines Chinese-language specialization with AI-powered pre-qualification.

Who we serve first

Phase 1 starts where the pain is clear, the budget exists, and repeat hiring is visible.

01

Manufacturing FDI
CN / TW / HK-linked employers with recurring operational roles and fake HSK risk.

02

Logistics & Supply Chain
Repeated hiring pain, Mandarin documentation needs, and recurring churn.

03

Trading / Sourcing
Small bilingual sourcing pool and a need for trusted Mandarin supplier-facing talent.

Target employer profile

● 50-500 employees

● Hiring 3+ roles per quarter

● HCMC / Binh Duong / Dong Nai / industrial zones

● Active operations in Vietnam

● Local HR or Taiwan-linked decision maker

● Responsive and payment-capable

Strict non-ICP filter

· <20 employees without HR structure

· No urgency under 30 days

· Unclear requirements

· One-off hiring only

· Poor payment history

· No Vietnam operations

Phase 1 prioritization

Start where pain is clearest, budget is available, and repeat hiring can be observed quickly.

Segment	Core pain	Coverage	Phase	Role focus
Manufacturing FDI (CN/TW/HK)	Fake HSK risk, HR screening waste, critical roles open 30–90 days	Strong	Phase 1 Primary	Purchasing / Admin, Production Coordinator, Interpreter
Logistics & Supply Chain	Cannot verify Chinese, same roles reopen, Mandarin docs earlier in funnel	Strong	Phase 1 Primary	Sales Logistics, Operations / Customs, Coordinator
Trading / Sourcing	Small bilingual pool and cold start every hiring cycle	Good	Phase 1 Secondary	Sourcing, Merchandiser, Purchasing
Tech SME / CN-linked	Founder / CTO doing screening; bad hire slows delivery	Partial	Phase 1 Secondary	Developer / PM with Mandarin working context
Electronics OEM/ODM	Technical Chinese document reading and QA/spec gaps	Gap	Phase 2	Technical Engineering, Supply Chain Coordinator

Why Manufacturing + Logistics first

Clearest pain + Budget available + High volume + Repeat signal

Why Electronics moves to Phase 2

Requires deeper technical document-reading verification capability.

CORE VALUE

Reduce uncertainty before the employer meets anyone

Everything in the workflow exists to make screening faster, clearer, and more defensible.

Jarvis Trust Layer

The system that turns candidate claims into employer-ready evidence

Chinese proficiency test

AI-scored, mapped to HSK and job context

Verification + AI matching

Profile proof + fit score and screening summary

Ranked shortlist

3-5 pre-qualified CVs with strengths, weaknesses, risks

Core value = verified confidence, not more applications.

- A

Verify Chinese proficiency first

Do not wait until interview to learn the candidate cannot actually do the job.
- B

Reduce wasted interviews

Only pre-qualified candidates should reach the employer’s calendar.
- C

Create repeatable employer trust

Confidence in the shortlist is what creates repeat hiring behavior.

≤48h

First shortlist

≥70%

Qualified candidate ratio

≥95%

Day 30 hire retention

15–20%

Success fee after hire

Product Overview

Built around the RPO stack, from intake to fill.

What's Live Now

What we have built so far.

1 Chinese Proficiency Test

Candidates take an in-platform HSK test; AI scores it.

2 HSK OCR auto-verify + Jarvis verified badge

HSK certificate reads and verifies the level automatically.

3 AI matching and summary

AI scores candidate-job fit and generates a summary report for employers.

4 Domain screening test

AI generates a custom screening test candidates must pass before applying.

5 Hiring pipeline & candidate pool with AI assist

Manage and search candidates intelligently across the hiring pipeline and talent pool.

6 30-day hire verification

Ops confirms the hire is genuine within 30 days

Value by Stakeholder

Different users get different value, but the buyer remains employer-side.

One workflow, multiple value layers around employer-side demand.

Flywheel & Defensibility

Each loop strengthens the next — compounding advantage over time.

Go-to-Market Models

We choose the channel by segment and maturity.

1 Direct enterprise

Primary channel for employers with recurring Vietnam hiring needs.

Primary

2 Agency / RPO

Best for recruitment partners that need a screening layer.

Partner

3 Embedded

Best for HR software companies expanding into AI-powered hiring.

Platform

4 Managed RPO

Best for employers that want Jarvis to run the hiring workflow with them.

Scale

Monetization & PMF

We monetize after core value is proven, and PMF shows up through repeat behavior.

Monetization Model

Free to try

Lower friction. Employers can test the workflow without commitment.

Outcome-based fee

Per-hire or success-fee pricing. No hire, no payment.

RPO retainer

Later-stage model for broader service once workflow reliability is proven.

Monetization follows value.

PMF Signal

- Leading indicator

Verified pool depth

- North star

4-6 hires / month

- PMF confirmed

Repeat employer rate

- Not optimizing

DAU / engagement

PMF shows up as trust, repeat employers, and sustained hires.

Execution Phases

First prove core value. Then monetize. Then scale into hiring infrastructure.

Candidate retention features come later, after the employer wedge is working.

KPI / Metrics System

In phase 1, we optimize for verified shortlists and repeat employer behavior before scaling paid hires.

North Star Metric

- Long-term North Star: Successful Paid Hires
- Phase 1 target: 2–3 paid hires in 3 months

Core KPIs for the next 3 months

Focus on top-of-funnel growth and real employer usage before hire volume scales.

Operating signals that matter

These are the strongest early indicators of product-market fit and commercial willingness to pay.

Ecosystem Timeline

From core hiring to cross-border talent infrastructure.

Appendix

From Education to Recruitment

How training, verification, and hiring compound into one network.

Execution Timeline

The Opportunity

Vietnam's Chinese-speaking talent market is growing rapidly — with a structural supply gap that isn't closing.

\$252B

VN–China bilateral trade 2025
+26.5% YoY — record high

50% ↑

Chinese-language JD growth
Year-over-year, 2024 → 2025

25–30%

Talent supply met
70–75% of FDI employer demand unfilled

10,000+ open roles in Northern Vietnam KCNs (Q1 2026). Job volume is rising — but qualified bilingual candidates cover less than 30% of demand.

Why now: the early funnel is breaking

Hiring complexity is growing faster than recruiter capacity, especially for Chinese-speaking cross-border roles.

Employer Profiles

E1 & E2 — highest priority targets. Each has a different pain threshold and trust signal.

Priority 1 — Manufacturing FDI

E1 HR Manager / TA Manager

Manufacturing FDI (China / Taiwan / Hong Kong)

100–1,500 employees · Bac Ninh · Hai Phong · Dong Nai Industrial Zones

PAIN THRESHOLDS

- Critical bilingual roles remain open for 30-90 days
- Production and supplier coordination delayed
- Factory Director complains about hiring speed
- TopCV returns mostly non-bilingual CVs

TRUST SIGNALS

- Verified HSK4+ before submission
- Work-Ready Mandarin assessment
- Factory-context bilingual validation
- Pay only after Day-30 hire verification

“Verified bilingual talent for factory operations — delivered fast, paid only after successful hire.”

Priority 2 — Logistics & Supply Chain

E2 HR Manager / Operations Director

Logistics & Supply Chain

50–1,000 employees · Hanoi · Ho Chi Minh City · Hai Phong

PAIN THRESHOLDS

- Sales Logistics hires leave after 3-6 months
- Chinese customer accounts at risk
- Peak season hiring urgency
- Need bilingual talent immediately
- Repeated hiring cycles create operational disruption

TRUST SIGNALS

- 5-day qualified shortlist SLA
- Logistics vocabulary verification
- Stability pre-screening
- 90-day replacement guarantee

“Fast access to verified logistics talent with Mandarin capability and lower hiring risk.”

Employer Profiles

Smaller initial focus, but strong long-term expansion opportunities.

E3

Engineering Manager / HR Manager
Electronics OEM / ODM
200-5,000 employees . Bac Ninh . Hai Phong . Thai Nguyen

PAIN THRESHOLDS

- Technical bilingual engineers are difficult to find
- Project ramp-ups delayed
- Quality and process documentation issues
- Candidates lost to Foxconn, Luxshare, Goertek

TRUST SIGNALS

- Technical document comprehension testing
- QA and engineering scenario assessments
- Employer-specific technical validation
- Candidate flight-risk screening

VALUE PROPOSITION

"Technical bilingual engineers validated beyond language certificates."

E4

Founder / CEO / CTO
Tech SME / China-Linked Startup
10-200 employees . Hanoi . Ho Chi Minh City

PAIN THRESHOLDS

- Founder spends time screening CVs
- Hiring mistakes slow product delivery
- Cross-border communication breakdowns
- Burn rate increases while roles stay open

TRUST SIGNALS

- Founder-ready shortlist
- Collaboration and communication scoring
- Stability and probation risk assessment
- 90-day replacement guarantee

VALUE PROPOSITION

"Pre-screened bilingual talent so founders can focus on building, not recruiting."

E5

Founder / General Manager
Trading / Sourcing / Import-Export
10-300 employees . Hanoi . Ho Chi Minh City . Binh Duong

PAIN THRESHOLDS

- Founder spends hours translating supplier conversations
- Difficult to find sourcing talent with Mandarin
- Purchasing and RFQ workflows slow down
- Business growth limited by hiring bottlenecks

TRUST SIGNALS

- Sourcing knowledge verification
- Purchase Order workflow assessment
- Incoterms and supplier communication validation
- Time-saving ROI-focused hiring

VALUE PROPOSITION

"Domain-verified sourcing talent that frees founders to focus on revenue."

EMPLOYER STRATEGY

Validation-led employer acquisition focused on bilingual hiring pain, trust building, qualification, and outcome-based placement.

TONE: Practical & Direct • Data-driven • Reliable • Transparent • Validation-led | Speak with market realities, not recruitment clichés.

Candidate Personas

Priority Candidate Personas

P1 & P2 are the primary acquisition targets. P3 runs on a separate outbound-only track.

P1

The Fast Mover

Gen Z • E-commerce & CrossBorder

WHO

- Female • 21–25 • 0–2 yrs exp
- Self-taught via TikTok & supplier WeChat

WANTS

- Fast income + uncapped commission
- Brand she can post about publicly

FEARS

- Ghost companies & fake commission structures
- 11PM WeChat boss culture

P2

The Strategic Mover

Gen Y • Purchasing / HR / Supply Chain

WHO

- Female • 26–34 • 3–8 yrs exp
- Contractual Chinese • not conversational

WANTS

- Social Insurance at 100% actual salary
- Job scope that truly matches the JD

FEARS

- 'EA to Chinese Director' trap
- Unlimited scope creep (kiêm nhiệm)

P3

The Silent Specialist • Male Engineer (QC/QA • ME • PE) • Wants recognition as engineer, not translator • Channel: LinkedIn InMail outbound only — separate track, no shared content calendar

P1 & P2 respond to inbound content. P3 requires proactive outbound - the same post that attracts P1 actively repels P3.

Candidate Strategy

TONE: ● Precise, not generic ● Deeper market knowledge ● No push — candidate chooses ● Radical transparency ● Fast & specific follow-up

Target Use Cases

1 Mass Hiring — Manufacturing, Hospitality, F&B

Employers hiring 50–500 workers per cycle. Every day of delay has a direct operational cost. Language fit is non-negotiable. Jarvis screens for Chinese level and domain knowledge before a recruiter reviews a single CV.

2 Recruiter Productivity — Agency & In-house

Recruiters spend highest-value hours on qualified candidates, not CV triage. AI-scored shortlists arrive pre-ranked and pre-verified. Recruiter reviews 12, not 300. Same team closes more roles without adding headcount.

3 Pre-Screen Automation — First-Round Replacement

Domain screening tests replace or compress the first interview round for roles with clear technical requirements. Candidates who pass arrive already proven. The conversation starts at a higher level.

4 Cross-Border Talent — Vietnam → Taiwan

Language, culture, and domain fit determine whether a cross-border hire succeeds. Jarvis verifies all three before a CV reaches the employer. No surprises at interview.
