ABOUT ME

Technical Co-Founder who built and scaled a distributed logistics platform end-to-end — from architecture design and backend systems to mobile/web applications and infrastructure — powering a \$4M+ annual revenue business with positive margins.

SKILLS

Technical Team Leadership

Project & Sprint Management

System Architecture

Strategic Decision-Making

Cross-functional Collaboration

EDUCATION

Hanoi University of Science and Technology

Automation Control Engineering

2013 - 2018

EXPERIENCE

SNT, JSC - HpTek Global

2019 - Now

Co-Founder & Solo Builder

Tasks

- Designed and built scalable backend architectures and AI-powered systems for logistics and SaaS platforms.
- Defined AI strategy across products, balancing model performance, infrastructure design, and operational cost to ensure sustainable unit economics.
- Led end-to-end technical execution — from system design and infrastructure decisions to deployment and production monitoring.
- Partnered closely with founders and business stakeholders to translate strategic goals into scalable technical roadmaps.
- Owned architecture decisions to ensure reliability, fault tolerance, and long-term maintainability.

Projects

- Quanlylogi – Transport Management System (TMS) integrating AI to track driver behavior and improve safety monitoring.
- B2B Logistics Platform – Built to digitalize transportation processes for enterprises, connect with contractors, manage bidding, and integrate financial services (e.g., insurance, PVOIL Easy fuel payments).
- Outsourcing Services – Delivered AI-focused outsourcing and consulting projects for clients in Japan and Vietnam.

Achievement

- Secured funding from Zeroth.ai (Japan, 2018) and VSV Capital (Hanoi, 2020).
- Co-developed a B2B marketplace platform serving hundreds of contractors and enterprise clients, enabling seamless collaboration, bidding, and digital transactions.

FPT Software

2020 - 2024

Technical leader, AI Engineer

Tasks

Researched and evaluated AI technologies
Designed and validated solution architectures
Built and deployed AI models
Collaborated with stakeholders and PMs
Managed small to mid-sized engineering teams

Projects

GANs for facial filter - Co-researched with a Japanese client to develop a real-time beauty filter using Generative Adversarial Networks (GANs). The system transfers beauty and makeup features onto faces in livestream applications, enabling natural and visually appealing enhancements during live video

DOJI Smart - Developed an intelligent receptionist solution using Pepper Robot, integrating chatbot and facial recognition capabilities to enable natural human interaction. Also integrated ARKit on iPad to allow customers to virtually try on jewelry, enhancing the in-store shopping experience with augmented reality.

Topica Edtech Group

2018 - 2020

AI Engineer

Tasks

Researched and applied AI technologies to enhance the company's core products

Projects

Emotion Recognition for Teachers
Student Chat Emotion Filtering
Voicebot for Automated Testing
AI-Powered Math Assistant
